

NexaMart Marketing Channel & Budget Allocation Policy

Version: 2.2 | Effective Date: Q1 2026

Objective

To optimize customer acquisition costs (CAC) and maximize Return on Ad Spend (ROAS) across digital and offline channels.

Channel Budget Allocation Rules

- Core Channels: Paid Search and Mobile App notifications receive baseline allocations of 40% and 25% of total monthly marketing spend, respectively.
- Experimental Channels: Display and Affiliate channels are restricted to a combined maximum of 20% of total budget unless quarterly ROAS exceeds 3.5.

ROI and Performance Targets

- Minimum ROAS Threshold: Any active campaign maintaining an average ROAS below 2.0 for 7 consecutive days must undergo budget reduction or automated throttling.
- Conversion Rate Optimization: Campaigns showing a sudden drop in click-to-conversion efficiency greater than 15% must trigger a review alert for the Growth Team.
