

NexaMart Dynamic Pricing & Discount Policy

Version: 2.6 | Effective Date: Q1 2026

Objective

To maintain healthy gross margins while remaining competitive across product categories through controlled dynamic pricing and automated discounting rules.

Dynamic Pricing Limits

- **Maximum Price Variance:** Base product prices cannot fluctuate by more than 15% within a single 30-day window, regardless of real-time demand spikes.
- **Floor Margins:** No product may be discounted below a hard gross margin floor of 12% over baseline unit acquisition cost.

Discount Thresholds

- **Standard Tier Discounts:** Automated promotional discounts are capped at a maximum of 15% for Regular customer segments and 20% for VIP/Enterprise segments.
- **Deep Clearance Thresholds:** Clearance discounts exceeding 25% require explicit sign-off from the Commercial Operations Lead.
- **Approval Workflow:** Any discount sequence that breaches standard limits must log a justification string into the pricing audit table.
